## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Invention I: Claims 1-18 are drawn to a wireless transaction apparatus, classified in class 455, subclass 66.1.

Invention II: Claims 19-34 are drawn to a method and corresponding system for conducting wireless transactions, classified in class 705, subclass 35.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another and materially different apparatus such as a PDA.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claim invention:

**If Applicant elects Invention I**, Applicant must then elect one species from each of the following groups:

**Type of housing:**

- a. Wristwatch

- b. Necklace
- c. Broach
- d. Security badge

**Functionality of Wireless communication:**

- a. Bluetooth communication
- b. Infrared communication

**Functionality of the display device:**

- a. Display timepiece data
- b. Display transaction data

**Functionality of the biometric data reading device:**

- a. Fingerprints
- b. Computer readable voice patterns
- c. Body electrical characteristics
- d. Body thermal characteristics

**Type of Power Source:**

- a. Battery
- b. Solar cell

**If Applicant elects Invention II,** Applicant must then elect one species from each of the following groups:

**Functionality of Wireless communication:**

- a. Bluetooth communication

b. Infrared communication

**Type of transaction:**

a. Purchase

b. Secure validated identification

**Storage of biometric data:**

a. User-wearable electronic wireless transaction apparatus

b. Secure apparatus located externally to user-wearable electronic wireless transaction apparatus.

**Functionality of the biometric data reading device:**

a. Fingerprints

b. Computer identifiable voice characteristics

c. Body electrical characteristics

d. Body thermal characteristics

Applicant is required under 35 U.S.C 121 to elect a single disclosed species for prosecution on the merits to which the claim shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 19 and 27 are generic.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention. An argument that a claim is allowable or that all claims are generic is considered non responsive unless accompanied by an election.

Upon allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after election, applicant must indicate which are readable upon elected species. MPEP § 809.02 (a)

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

The examiner notes that per MPEP 812.01 no telephone communication was made due to complexity of the restriction requirements.
